

The top programming language and database skills in demand

James McAlinden

5th July 2024

OUTLINE

- Executive Summary
- Introduction
- Methodology
- Results
 - Visualisation – Charts
 - Dashboard
- Discussion
 - Findings & Implications
- Conclusion
- Appendix

EXECUTIVE SUMMARY

- Introduction to the data and the objectives.
- Methodology.
 - Collecting the data.
 - Analysing the data.
 - Visualising the data.
- Findings and implications accompanied with visualisations.
- Broader discussion of the results.
- Final conclusions of the data analysed.

INTRODUCTION

- Programming language and database skills are critical to success for some jobs such as a web developer or data scientist.
- This report is about the top programming skills that are most in demand from various sources including:
 - Job vacancies.
 - Training portals.
 - Surveys.
- This report is mainly for an organisation involved in the global IT and business consulting services.
- The objective of this report is to understand:
 - The top programming languages in demand.
 - The top database skills in demand.

METHODOLOGY

- Collected data using APIs and web scraping tools.
- Cleaned the dataset, which involved removing duplicates, finding and imputing missing values, and normalising the data.
- Explored the data using histograms and boxplots to find outliers. Correlation analyses were also utilised.
- Visualised the data using, but not exclusive to:
 - Line charts.
 - Pie charts.
 - Stacked charts.

RESULTS

PROGRAMMING LANGUAGE TRENDS

Current Year

The top 10 languages worked with

Next Year

The top 10 languages desired next year

PROGRAMMING LANGUAGE TRENDS - FINDINGS & IMPLICATIONS

Findings

- Finding 1: In the current year, **JavaScript** was the most popular programming language to be used.
- Finding 2: For next year, most respondents said they desire to use **JavaScript**.
- Finding 3: **PHP** and **C++** are two language programmes used in the current year but are not desired language programmes for next year.

Implications

- Implication 1: In the current year, most respondents liked using **JavaScript** as a programming language.
- Implication 2: For next year, most respondents will continue using **JavaScript**.
- Implication 3: **PHP** and **C++** will not be as popular next year in comparison to the current year. For next year, respondents are choosing other programmes such as **Go** and **Kotlin**.

DATABASE TRENDS

Current Year

The top 10 databases worked with

Next Year

The top 10 databases desired next year

DATABASE TRENDS – FINDINGS & IMPLICATIONS

Findings

- Finding 1: In the current year, **MySQL** was the most popular database to be used.
- Finding 2: For next year, most respondents desire to use **PostgreSQL**.
- Finding 3: **Oracle** is not in the top 10 databases that are desired for next year.

Implications

- Implication 1: In the current year, most respondents worked with **MySQL**.
- Implication 2: For next year, **MySQL** will not be the most desirable database to work with. Instead, **PostgreSQL** will be the most desired database to work with.
- Implication 3: **Oracle** will not be a popular database to be working with for next year.

Demographics

Respondent by Gender

Gender
Woman Man

Respondent count for country regions

Respondent count...
865 39,154,240

Respondent count by age

Respondent count by gender, classified by formal education level

Educational level
● (no value) ● Associate degree ● Bachelor's degree (BA, BS, B.Eng....
● I never completed any formal edu... ● Master's degree (MA, MS, M.Eng.,....
● Primary/elementary school ● Professional degree (JD, MD, etc.) ● Secondary school (e.g. American ...
● Some college/university study wit...

DISCUSSION

OVERALL FINDINGS & IMPLICATIONS

Findings

- Finding 1: **JavaScript** remains the most popular programming language for the current year and next year.
- Finding 2: **PostgreSQL** will be the most desirable database to work with for next year.
- Finding 3: The majority of the respondents have a bachelor's degree.

Implications

- Implication 1: **JavaScript** always outperforms the other programming languages among the respondents.
- Implication 2: The demand for different database skills changes each year. In the current year, **MySQL** was the most popular, but next year **PostgreSQL** is most desirable.
- Implication 3: The most demand for programming languages and database skills comes from respondents with a bachelor's degree.

CONCLUSION

- Point 1: JavaScript and HTML/CSS are the two most popular programming languages this year and the two most desirable for next year.
- Point 2: MySQL is the most popular database worked with in the current year, but next year PostgreSQL will be most popular.
- Point 3: The majority of the respondents have a bachelor's degree.

APPENDIX
